

A. The errors and problems I found:

- The payment amount does not have the money type.
- Card number and postal code have the sentence (no dashes) between brackets in the title, but the user may write some dashes or letters by mistake, so we need to prevent anything other than numbers to be written here even if the user writes it by mistake.
- The cardholder name is divided into three different inputs, it's better to make it one input with the title cardholder name because the way the name is written on the card is different from country to another.
- The star that says the blank is a must is next to the blank, it's better to put it next to the title (better style and more comfortable for the eyes).
- There is no blank for the CVV and without it the web has less security.
- The state is a must in the page, but not every country has states.

B. Test cases:

- Successful test:
The user enters valid and true informations then clicks continue and the system gives a success message.
- Empty (must) blank:
The user forgets to fill a must blank like the city, the system should give him a small pop-up message next to this blank.
- Wrong informations:
The user enters non valid or false informations then clicks continue and the system gives a fail message that says the informations provided does not match any card or something like that.

C. Product solution:

- The most important one is the CVV because without it the web security is in a big problem and users cant trust the web like this.
- The other important one I thought about is no dashes in the titles because users can make mistakes and clicks dash or a letter by mistake, we can do one of these two things
 1. When the user wants to fill the postal code and the card number blanks, he gets a numbers keyboard so he cant write anything other than numbers.

2. Give the user the normal full keyboard but if he clicks something other than numbers the system doesn't write it in the blank and maybe we can give him a little warning message that this blank doesn't get anything other than numbers.
